

# Research & Development Project Manager

## Introduction

Von Roll is the world market leader in the field of electrical insulation and is also active in the development and synthesis of resins. We are the only company to offer the entire portfolio of solid and liquid insulation materials, including engineering consulting, testing and services, from a single source.

Our products are essential for the global electrification. Our site in Italy (Trofarello, near Turin) is regarded within the Group as an important center of competence for the development and production of electro-insulating resins. Our customers include the world's leading OEMs for electric motors and devices as well as medium-sized companies and specialized distributors.

As one of the most traditional, industrial companies in Switzerland, we have always focused on innovation, quality and sustainability. We are the leading brand in the industry around the world.

If you have a strong passion in designing and testing new products and solutions and feel excited in taking part of the success of highly technical projects, if you like investigating and look for new challenges this is the perfect opportunity for you.

## Tasks

- Your main job will be the coordination and execution of R&D projects and related tasks
- You will manage the execution and coordination of different projects with dedicated R&D team and supporting functions
- You will plan the project relevant activities in detail: feasibility study, tasks, costs analysis, definition of test programs, measurements for validation of development steps, evaluation of test results and reporting activities (technical data sheets, manufacturing and test instructions, control plans)
- You will be responsible for development of new products according to specification within budget and time
- You will be responsible for product certifications and product qualifications in relation to projects assigned to your supervision. You will also ensure sampling to customers and customer qualifications
- You will take over the responsibility for homologation of raw materials, coordinating industrialization of manufacturing
- You will develop testing methods including connected documentation and give support to sales documentation
- You will directly report to R&D manager

## Requirements

- Master's degree in Chemistry or Material Science, PhD will be highly appreciated
- At least 5 years of relevant professional experience in execution of development of tasks or project management, required specific technical experience in the development area
- Previous experience in paints / coatings / adhesives / resins for impregnation and potting would be an advantage
- Analytical and scientific skills, pragmatic, inquisitive, dynamic and self-driven personality with high problem-solving ability, leadership and social competence
- Entrepreneurial thinking and a structured way of working in an intercultural organization are a minimum requirement
- Ability to work interdisciplinary in direct contact with customers
- Fluent English and Italian, both written and spoken, knowledge of German and French would be advantageous
- Available to travel for limited time (max 20%).
